

COCKWELLS

CAREERS

Technical Designer

The Cockwells design team seek an enthusiastic member who has previous experience in the marine industry and has a good knowledge of boat terminology and components. An essential skill for this role is to be able to use Rhino3D software and be confident in producing a wide range of 2D drawings and 3D models for a variety of components required in the build of a Cockwells launch. This includes working with the engineering department to produce schematic drawings which link with the project bill of materials for various systems.

Build drawings will need to be of the quality to go out onto the shop floor or be sent to subcontractors to work from. This could include 3D models being sent away for 3D printing or CNC cutting. The candidate must be happy to work with others and to an existing drawing system.

An important role the employee will be responsible for will be to update drawings of components that have previously been built by going into the yard and checking them for themselves.

A useful (but not essential) skill would be the ability to run Solidworks software for future upgrades.

Please send CVs and portfolios to henry@cockwells.co.uk
