Design draft	0.46m / 1ft 6in
Displacement	2.8 tonnes
Engine	Twin 300hp OXE outboards
Maximum speed	50 knots

COCKWELLS

9M MODULAR TENDER

Our ingeniously-designed Modular tender provides unrivalled flexibility with its 9m base tender and range of custom-built modules to reflect your specific requirements.

Once lowered on board, these bespoke modules transform your base tender into a luxurious enclosed limousine; a fast guest transfer shuttle with jockey-style seating for up to 12 guests; a beach club with DJ station and BBQ grill; or any other bespoke module that you would like us to design to suit your individual needs.

When the modules are stored on the mothership or support vessel, the base tender also provides your crew with the space to transport a small car or all-terrain vehicle, or a platform to use as a wash down or work boat.

The solid, seaworthy hull makes for a comfortable ride. Its twin 200hp diesel engines have the power to transport a car at 44 knots whilst an electrically-operated integrated bow ramp allows easy boarding and loading from ship, shore and sand.
